

Pursuing a Better Investment Experience

1

Let markets work for you

The market is an effective information-processing machine. Millions of participants buy and sell securities in the world markets every day, and the real-time information they bring helps set prices.

World Equity Trading in 2015

	Number of Trades	Dollar Volume
Daily Average	98.6 million	\$447.3 billion

2

Invest, don't speculate

Over time, only a small fraction of money managers outperform the market after fees, and it is difficult to identify them in advance.

Percentage of funds that outperformed the index

3

Take a long-term approach

The financial markets have rewarded long-term investors. People expect a positive return on the capital they supply, and historically, the equity and bond markets have provided growth of wealth that has more than offset inflation.

Growth of a Dollar, 1980-2015 (Compounded monthly)

4

Consider the drivers of returns

Academic research has identified these equity and fixed income dimensions, which point to differences in expected returns. These dimensions are pervasive, persistent, and robust and can be pursued in cost-effective portfolios.

Dimensions of Expected Returns

EQUITIES

Market
Equity premium—stocks vs. bonds

Company Size
Small cap premium—small vs. large companies

Relative Price
Value premium—value vs. growth companies

Profitability
Profitability premium—high vs. low profitability companies

FIXED INCOME

Term
Term premium—longer vs. shorter maturity bonds

Credit
Credit premium—lower vs. higher credit quality bonds

5

Practise smart diversification

It's not enough to diversify by security. Deeper diversification involves geographic and asset class diversity. Holding a global portfolio helps to lower concentration in individual securities and increase diversification.

Diversified Portfolio

24.71%

Top 10 Holdings

6

Avoid market timing

You never know which market segments will outperform from year to year. By holding a globally diversified portfolio, investors are well positioned to capture returns wherever they occur.

Annual Returns by Market Index

7

Manage your emotions

Many people struggle to separate their emotions from investing. Markets go up and down. Reacting to current market conditions may lead to making poor investment decisions at the worst times.

Reactive Investing in a Market Cycle

8

Look beyond the headlines

Daily market news and commentary can challenge your investment discipline. Some messages stir anxiety about the future while others tempt you to chase the latest investment fad. When tested, consider the source and maintain a long-term perspective.

9

Keep costs low

Over long time periods, high costs can drag down wealth accumulation in a portfolio. Costs to consider include: Management fees, fund expenses and taxes.

Net Growth of \$1 Million

10

Focus on what you can control

A financial advisor can create a plan tailored to your personal financial needs while helping you focus on actions that add value. This can lead to a better investment experience.

- Creating an investment plan to fit your needs and risk tolerance
- Structuring a portfolio along dimensions of expected returns
- Diversifying broadly
- Reducing expenses and turnover
- Minimising taxes

Diversification does not eliminate the risk of market loss. There is no guarantee investment strategies will be successful. This information is for illustrative purposes only. See back page for additional information and important disclosures.
